SWISS
EXHIBITORS
ITMA 2023

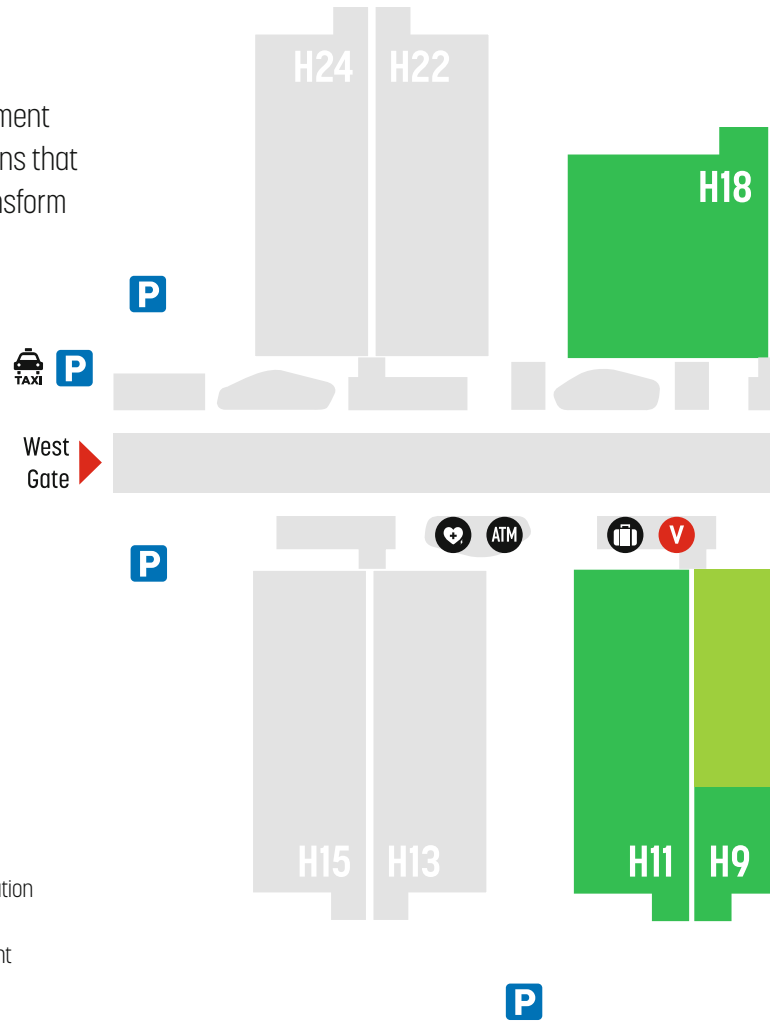

Transforming the World of Textiles

The world's largest international textile and garment technology exhibition, ITMA highlights innovations that will help textile and garment manufacturers transform and grow their business.

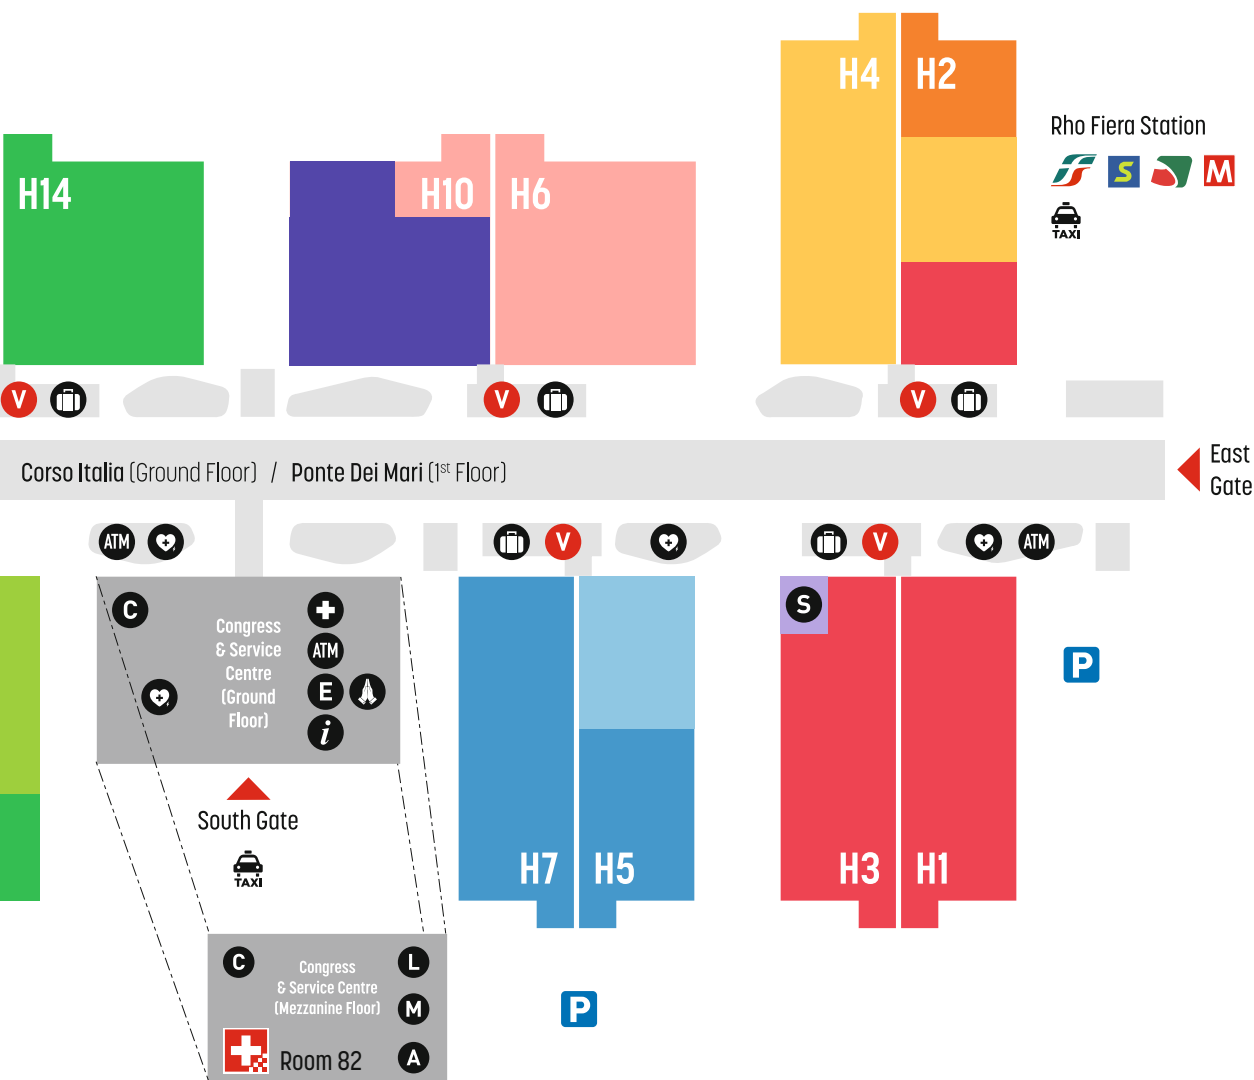

Sector Plan

 Chapter 1 Spinning	 Chapter 3 Nonwovens
 Chapter 2 Winding	 Chapter 8 Finishing
 Chapter 19 Research & Innovation	 Chapter 6 Embroidery
 Chapter 5 Knitting	 Chapter 10 Garment Making
 Chapter 12 Testing	 Chapter 11 Composites
 Chapter 20 Fibres, Yarns & Fabrics	 Chapter 13 Logistics
 Chapter 9 Printing & Inks	 Chapter 14 Recycling
 Chapter 16 Colourants & Chemicals	 Chapter 15 Software & Automation
 Chapter 4 Weaving	 Chapter 17 Plant Ops Equipment
 Chapter 7 Braiding	 Chapter 18 Services

INNOVATION: IT'S IN OUR DNA

swisstextilemachinery.ch

Geneva, Switzerland, 1783:
Jacob Scheppe invents a way of **carbonating liquids**, becoming the father of **sparkling water** - and founder of an industry which today sees over **200 billion liters** of fizzy soft drinks per year consumed worldwide.

Vevey, Switzerland, 1819:
François-Louis Cailler invents the now-familiar **tablet format for chocolate**. His simple idea makes chocolate available and **affordable worldwide**. Today, **one billion** Swiss-made chocolate bars are produced each year.

Geneva, Switzerland, 1956:

Philippe Guy Woog develops the **electric toothbrush**.

Using a machine in the mouth didn't appeal to everyone at first! But today **many millions** rely on automatic high-speed brushing to maintain healthy teeth and gums.

Canton Vaud, Switzerland, 1982:

Daniel Borel's **pc mouse** invention goes into series production, **connecting humans intuitively with their computers**. Several billion of these ingenious little devices now click and glide through countless functions and applications.

Invented in Switzerland.
Where the same innovative spirit drives textile progress today.

The power of 4,188 years of experience

Every member of the Swiss Textile Machinery Association has a unique innovation history. Experience has been passed down through the generations - along with the 'inventor gene' it seems. Many of the companies were established more than 100 years ago and the concept of innovation developed naturally for Swiss textile machinery manufacturers and service providers.

The blend of Swiss inventive spirit with top-class qualifications and expertise has created an unrivalled advantage. The years of experience and time-honoured traditions bring added value. Customers of Swiss Textile Machinery members trust this foundation to enhance their business success.

This assertion is founded on an impressive total of 4,188 years of experience for the association's member firms. Those years of textile progress could be compared with the time-span from the earliest multicolored fabrics made in Ancient Egypt around 2000 BC to today's ingenious technical textile products, used in applications such as aerospace.

Many of the textile technology innovations by Swiss companies have been well established - some of them for decades - but there is still more to come, starting with the latest novelties to be presented at ITMA 2023. These, and continuing developments in the years ahead, will influence future worldwide advances in textiles.

The Association

The Swiss Textile Machinery Association is the representative body for Switzerland's producers of textile equipment, systems and services. Currently 44 companies are affiliated, including manufacturers of machines and components, and service providers, for the textile industry. The companies offer solutions covering the entire textile value chain, from spinning to weaving, knitting, finishing, embroidery and quality control.

The Swiss Textile Machinery Association is part of Swissmem - the leading association for SMEs and major corporations in the Swiss technology industry.
